

Topic/Title:

CSS

Keywords/Questions:

`<div> / `

display :
block
inline-block
inline
none

position:
static
relative
absolute
fixed

top, left
right, bottom

Notes:

Display

a block with the display property block don't allow other blocks to be next to it

We can't scale the width and height of a block with the display property inline

inline-block allow us to do the both

Static / Relative positioning

static : is the default position put by the html

relative : is position element relative how it would have been positioned had it been static

Doesn't affect the flow of any other element in the screen

absolute : we positionning the element relatively to its parent

Affect the flow of others elements in the screen

Fixed: the element stay in play when we scroll

Summary:
